## WHAT I DO

I help teams close the gap between what AI is capable of and what it actually delivers inside their specific operations.

Most teams use AI like a search engine. I teach them to use it like an embedded collaborator — one that knows your context, remembers your decisions, and finds its own way to the right answer.

## EMPIRICAL FOUNDATION

The methodology is grounded in rigorous, deep-use research across complex, multi-layer systems — built from practice, and theory.

## WORKSHOP BRIEF

# Your team already uses AI. It just doesn't *know* you yet.

The problem isn't the tool — it's that AI has no orientation. Without one, it defaults to the broadest, safest answer it can find. Generic outputs. Repeated context. Diminishing returns. This engagement fixes the foundation.

## THE APPROACH

Before any session is prepared, a discovery call maps your operations and locates where your institutional knowledge actually lives. The workshop is then built around **your specific friction** — not a template. Your team does the implementation. I guide the thinking.

01

### Discovery

Map operations, locate knowledge, identify where AI currently fails

02

### Research

Domain-specific prep, custom workshop design, 3–5 days

03

### Workshop

Half or full day, live implementation, your context

04

### Follow-up

Validate what was built, answer what practice surfaces

## WHAT TEAMS WALK AWAY WITH

- A mapped knowledge base AI can navigate
- Diagnostic instinct — knowing when AI fails
- A repeatable workflow that holds context
- Team alignment on a shared mental model

## INVESTMENT

# AED 15,000 – 40,000+

Custom per engagement · Pilot pricing available

## AVAILABILITY

# 6 – 8 per year

Intentionally limited · Quality over volume
